

## ABSTRACT

5 The invention relates to an injection mould (1) for  
producing three-dimensional components. The mould has a  
system (2) for mould tempering having at least one groove  
(12) which is arbitrarily extended between two points in  
the available volume of the mould for conducting a tem-  
pering medium which is intended for tempering of modules  
10 (4, 8) included in the mould (1). Each groove (12) is  
along essentially its entire extent covered by a cover  
(15). The invention also concerns such a system (2) for  
mould tempering of injection moulds (1), as well as an  
injection moulding assembly comprising such an injection  
15 mould (1).
